## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on April 30, 2003 has been entered.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1,2,6,8-10,16,18 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2,6,8-10,16,18 are rejected under 35 U.S.C. 102(b) as being anticipated by Wang et al (PN 5,729,563).

Wang et al discloses an improved method of isolating an array of surface emitting lasers, as illustrated in figure 3.

Regarding claims 1,6,10,16,

In figure 3 Wang et al illustrates an array of conventional surface emitting lasers (SEL), where SEL has a bottom mirror (114), an active region (130), top mirror (115), top electrodes (123) and sharing a common substrate (112) and a common bottom electrode (122), as described in column 3 lines 37-67. Column 3 lines 1-5, describes the mirrors as formed from alternating layers having different indices of refraction. Column 3 lines 60-65, describes providing the laser array with trenches (125-128) and column 4 lines 1-5, describes the trenches as being empty and providing separate SEL.

FIGURE 3

Regarding claim 2,

Column 3 lines 16-19, describes the top mirror as having implanted a high resistivity region (26) for confining the current flow, where such region is illustrated in figure 3 as (124).

Regarding claim 8,

Column 3 lines 1-5, describes the mirrors as formed from alternating layers having different indices of refraction.

Regarding claims 9,18,

Figure 3 illustrates a lower electrode (122) on the substrate and a top electrode (123) on each of the SEL.
